

## Tournevis PHILIPS® N 1 x 80 mm, isolé 1000V

Internal Reference: 433011

Insulated Phillips screwdriver 1000V EN60900

A white shell is molded onto the metal parts of the tool. This insulating shell is unbreakable and non-removable. It ensures instant and permanent total insulation of the tool.

The yellow-orange insulation covering the tool in its shell is unbreakable and non-flammable. As soon as this layer is so damaged that the white layer underneath becomes visible, the tool is no longer usable.

The finish ensures that the tool fits perfectly in the hand, even with greasy rubber gloves.

The insulation of each tool is tested at the end of the manufacturing process.

All dielectric properties are guaranteed from -20°C to +60°C.

## Characteristics

Length	80 mm
Weight	47 kg
Ph	1
